Celloras

An agent for plant cell annotation.

From gene expression to candidate cell types, with the supporting evidence.

Ask a question. Get a cell map, marker evidence and source links.

Starting with soybean. More plants next.

What changes with Celloras?

Without Celloras		With Celloras
Run analysis scripts	➡	**Ask the agent to run the analysis**
Look up marker references	➡	**Review genes and source links**
Reconstruct past decisions	➡	**Ask what you decided and why**

The agent analyses and recommends. You review and correct the results.

What the agent actually does

Checks marker references

Zetaris

Measures gene activity

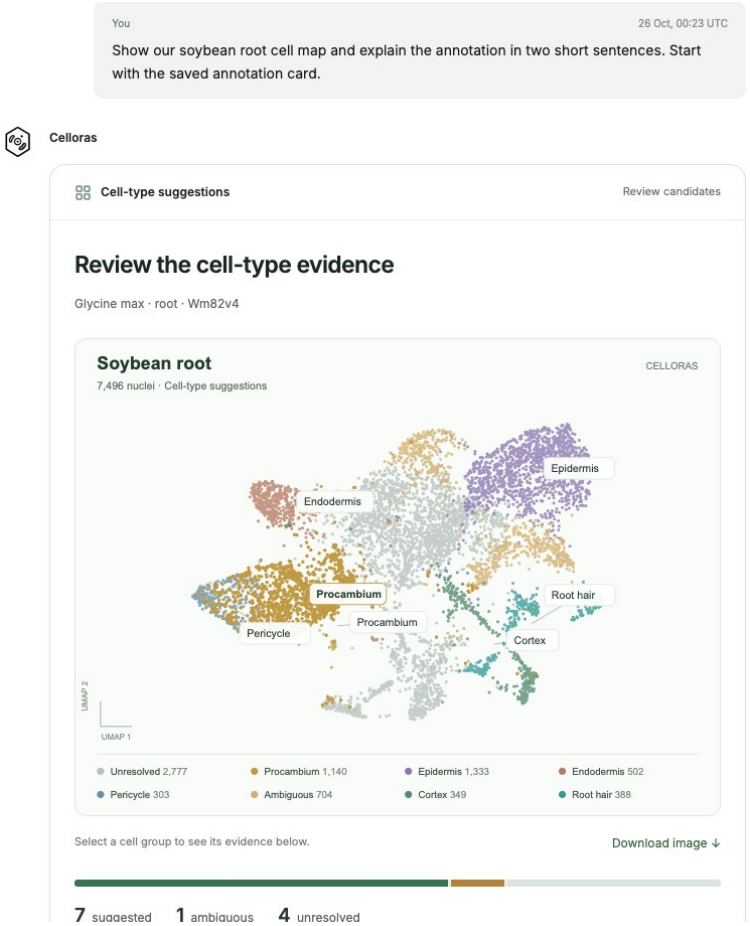

Scientific analysis tools

Proposes cell types and explains why

Evidence and uncertainty

Recalls your reviewed decisions

Meterless H-MEM

A real conversation. An interactive cell map. Evidence you can inspect.

“What did we decide, and why?”

The agent recalls your latest decision and links to its source.

Actual agent reply

Your latest decision for group 6 is unresolved: you withdrew the provisional Root hair label pending review of independent evidence.
