Celloras

An agent for plant cell annotation.

From gene expression to candidate cell types, with the supporting evidence.

Ask a question. Get a cell map, marker evidence and source links.

Starting with soybean. More plants next.

What changes with Celloras?

Without Celloras		With Celloras
Run analysis scripts	➡	**Ask the agent to run the analysis**
Look up marker references	➡	**Review genes and source links**
Reconstruct past decisions	➡	**Ask what you decided and why**

You keep the scientific judgment. The agent coordinates the work.

What the agent actually does

You ask

“Which cells are these?”

Celloras agent

Checks published markers
Zetaris

Measures gene expression
Scientific analysis tools

Recalls your reviewed decisions
Meterless H-MEM

You receive

Cell map
Supporting genes
Source links

You review the evidence and save your decision.

“What did we decide, and why?”

The agent recalls your latest decision and links to its source.

Actual agent reply

Your latest decision for group 6 is unresolved: you withdrew the provisional Root hair label pending review of independent evidence.
