Celloras

Cell annotation, with evidence.

Naming plant cells means checking genes, references and papers by hand.

Celloras runs the analysis and keeps the evidence with your decision.

For plant single-cell researchers. Starting with soybean.

One conversation. A complete investigation.

01 **Ask the agent**

Annotate the soybean root groups.

02 **Inspect the evidence**

Root hair candidate. Two supporting genes.

03 **Save your judgment**

Keep unresolved until evidence is stronger.

Actual gene-expression measurements

Zetaris finds the reference.
H-MEM remembers the decision.
